

PRODUCT REQUIREMENTS DOCUMENT (PRD)

Google Maps Business Analysis Platform

****Version:**** 1.0

****Project Type:**** Data Analytics Platform

****Prepared By:**** Team _____

****Submission:**** Week 3

1. Executive Summary

The ****Google Maps Business Analysis Platform**** is a data analytics solution that analyzes publicly available Google Maps business listings to identify businesses with limited digital presence. The platform collects, cleans, and analyzes business information such as name, category, ratings, reviews, website availability, and location to generate meaningful insights.

The main objective is to help digital marketing agencies, web development companies, consultants, and students identify businesses that could benefit from digital transformation. The platform presents findings through dashboards, charts, and reports, enabling informed decision-making.

2. Problem Statement

Many local businesses listed on Google Maps do not have a website or a strong online presence, reducing their visibility and customer reach. Manually identifying such

businesses is time-consuming and inefficient. A centralized analytics platform is required to organize business data, identify digital gaps, and generate actionable recommendations.

3. Product Vision

To develop an intelligent business analytics platform that converts Google Maps business data into valuable insights, helping users identify businesses with high digital growth potential.

4. Business Goals

- * Identify businesses without websites.
 - * Analyze ratings and customer reviews.
 - * Support lead generation for agencies and developers.
 - * Simplify business analysis through dashboards.
 - * Generate professional reports for decision-making.
-

5. Target Users

- * Digital Marketing Agencies
- * Website Development Companies
- * Business Consultants
- * Freelancers
- * Entrepreneurs

* Data Analytics Students

6. User Stories

* As a **Data Analyst**, I want to analyze business data so that I can identify trends.

* As a **Web Developer**, I want to find businesses without websites so that I can approach potential clients.

* As a **Consultant**, I want dashboard-based insights so that I can make informed recommendations.

* As a **Student**, I want to explore business datasets to improve my analytics skills.

7. Project Scope

In Scope

* Business data collection

* Data cleaning

* Business categorization

* Website availability analysis

* Rating & review analysis

* Dashboard generation

* Report export (CSV/Excel)

Out of Scope

- * Google Maps API integration
 - * CRM integration
 - * Email automation
 - * Website development
 - * Online payment features
-

8. Functional Requirements

ID	Requirement	Priority
FR-01	Collect business information	High
FR-02	Clean and validate data	High
FR-03	Analyze ratings and reviews	High
FR-04	Detect businesses without websites	High
FR-05	Generate dashboards and charts	Medium
FR-06	Export reports	Medium

9. Non-Functional Requirements

- * Fast and responsive performance
- * Accurate data processing
- * User-friendly interface
- * Reliable report generation

- * Easy maintenance and scalability
 - * Secure handling of collected data
-

10. Workflow

...

Google Maps Data

|

Data Collection

|

Data Cleaning

Business Analysis

|

Dashboard & Charts

|

Opportunity Detection

|

Report Generation

...

11. Risks & Mitigation

Risk	Mitigation
Missing website information	Validate data before analysis
Duplicate business entries	Remove duplicates during preprocessing
Incomplete records	Handle missing values appropriately
Incorrect categorization	Standardize categories before analysis

12. Success Metrics

- * Analyze 100+ business records.
 - * Detect businesses without websites with high accuracy.
 - * Generate meaningful dashboards and reports.
 - * Successfully export analysis results.
 - * Provide actionable business recommendations.
-

13. Deliverables

- * Clean Business Dataset
- * Analysis Dashboard

- * Charts & Visualizations
 - * Business Opportunity Report
 - * CSV/Excel Export
 - * Final Project Presentation
-

14. Future Scope

- * Google Maps API integration
 - * AI-based opportunity scoring
 - * Predictive business analytics
 - * Real-time dashboard updates
 - * Automated lead generation
 - * Cloud deployment
-

15. Conclusion

The ****Google Maps Business Analysis Platform**** provides a practical solution for analyzing local business data and identifying digital growth opportunities. By combining data cleaning, visualization, and reporting, the platform enables users to make data-driven decisions efficiently while serving as a valuable learning project in data analytics and business intelligence.
